

## **Adya Water Filtration Unit with 16 oz Adya Clarity**

**Retail Price: \$300.00,  
my price: email me (info@AdyaClarity.biz)**

This Free-standing, no electricity needed, gravity water filtration system. Includes a .2 micron ceramic filter, a multi-level filter of raw earth including activated carbon and zeolites, and a 16 ounce bottle of Adya Clarity (retail value of \$85).

What is the result? Mineralized, mildly alkaline water that tastes like fresh, mountain spring water. Combine the technology of our powerful filtration unit with the power of Adya's mineral solutions and create living, oxygenated, fresh tasting mineral water.

We know most people's only choice for mountain spring water is to obtain it in plastic bottles. But, now you have a choice to eliminate plastic bottles, landfill waste, and create such water in your own home.

How can you create natural, mountain spring water in your home?

Combine the power of our gravity-fed water filtration system with Adya's mineral solutions to balance your water as only nature can.

We offer a gravity-fed water filtration system that uses the following natural technologies:

- \* Ceramic filter: with a typical .2 micron size sieve, our ceramic filters are highly effective at removing many types of particles that lurk in our water. For example, bacteria's size is between 0.5 and 1.0 microns. Ceramic filters last about 1 -2 years depending on water quality and number of gallons filtered.

- \* Natural, 4-layer earth filter: your water will filter through 4-layers of earth which include activated carbon and zeolites. Throughout nature, these materials are used to purify earth's water. Earth filters last about 300 gallons.

- \* Magnetic Water Spigot (F.I.R. far infrared): The earth with its natural magnetic field naturally charges water in lakes, wells and running streams. Treating water with magnetic fields can restore the water's natural energy and balance.

\* Adya ionic mineral solutions: our mineral solutions combine with water to eliminate or reduce such substances as chlorine or fluoride. Our minerals also ensure that bad bacteria cannot thrive. Adya ionic minerals are a great catalyst for and supplier of oxygen due to its minerals' ability to draw, and hold oxygen in water.

The Adya Mountain Spring Water Filtration System is a gravity-fed, free-standing unit that does not require any electricity.

**Directions:** The Adya Mountain Spring Water Filtration System has two water chambers.

The upper chamber has a 5 liter capacity (approximately 1-1/2 gallons) and the lower chamber has a 10 liter capacity (approximately 3 gallons.)

Fill the upper chamber with water and add a minimum of 1 teaspoon of Adya ionic minerals. The water will drip through the ceramic filter of the upper chamber, down through the natural, 4-layer earth filter, into the water reservoir.

Maintenance on the unit includes periodically rinsing off the ceramic filter, re-ordering the carbon earth filter about every 300 gallons, re-ordering the ceramic filter about every 1 - 2 years, and re-ordering your Adya ionic minerals. The life of the ceramic filter is determined by the quality of your water, amount of water filtered, and the gentleness by which you treat the filter.

Enjoy the great taste of Adya water!
